

ABSTRACT

5 A structure for mounting equipment inside a vehicle. The structure includes at least one structural member defining a platform. The platform is characterized by at least one equipment bay adapted to receive equipment. At least one
10 attachment site is provided on the structural member, where this attachment site is adapted to be resiliently attached to the vehicle such that the platform is suspended inside the vehicle. When the structure is installed inside the vehicle and the vehicle is in motion,
15 the platform is operative to follow the movement of the vehicle while maintaining the equipment mounted thereto in a substantially rigid assembly.
